Sega Enterprises, Ltd.

PROTECTION OF EYES FROM LASER BEAM DURING SERVICING

This set employs laser. Therefore, be sure to follow carefully the instructions below when servicing.

Warning

When servicing, do not approach the laser exit with the eye too closely. In case it is necessary to confirm laser beam emission. Be sure to observe from a distance of more than 30 cm from the surface of the objective lens on the optical pick-up block.

Caution: Invisible laser radiation when open and interlocks defeated avoid exposure to beam.

Caution

Use of controls or adjustments or performance of procedures other than those specified herein may result in hazardous radiation exposure.

This console is classified as a CLASS I LASER product.

SAFETY PRECAUTIONS

Notice: Comply with all cautions and safety related notes located on or inside the cabinet and on the chassis.

- 1. When replacing a chassis in the console, all the protective devices must be put back in place, such as barriers, non-metallic knobs, adjustment and compartment covers/shields, isolation resistors/capacitors, etc.
- 2 When service is required, observe the original lead-dress. Extra precautions should be taken to assure correct lead dress in the high voltage circuit.
- 3. Always use the manufacturer's replacement components. Especially critical components as indicated on the circuit diagram should not be replaced by other manufacturer's. Furthermore, where a short-circuit has occurred, replace those components that indicate evidence of overheatine.

PRODUCT SAFETY NOTICE

Many electrical and mechanical parts have special safety-related characteristics. These are often not evident from visual inspection nor can the protection afforded by them necessarily be obtained by using replacement components mated for higher voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in this Service Manual. Electrical components busing such features are identified by marking with a £ in the parts list in this Service Manual. The use of a substitute replacement component which does not have the same safety characteristics as the SEGA recommended replacement one, shown in the parts list in this Service Manual, may create shock, fire, or other hazards. Product Safety is continuously under review and new instructions are issued from time to time.

CAUTION ON FUSE REPLACEMENT

Caution: For continued protection against risk of fire, replace only with same type, amperage, volt fuse.

Attention: Afin d'assurer une protection permanente contre tout risque d'amorçage électrique, replacer uniquement par un fusible de meme type et de amperes volts.

This symbol indicates a Fast Operating Type Fuse.

This symbol indicates a Time Lag Type Fuse.

SATURN COMPATABILITY

Audio CD:

The normal audio Compact Disc is playable on the Saturn machine, and can be altered with all the effects of a modern Hi-fi and more. Surround sound, vocal cut-out for Karaoke, program sequence of tracks and shuffle to name but a few. You need no extra equipment to play music CDs on your Saturn.

CD+G:

CD and Graphics are a format where simple visuals can appear on the screen that relate to the music. These visuals might include stills of the band, or other pictures. You need to buy no extra equipment to use CD+G on your Saturn.

CD+EG:

CD and extended graphics is a new medium ready to be utilised by the music community. It is basically an enhanced version of what is described above in CD+G. You need no extra equipment to use CD+EG on your Saturn.

MPEG:

MPEG is the standard industry format for compressing Full Motion Video footage. This means that the footage takes up less disk space, and when it is to be viewed, the MPEG program decodes the footage and plays it on screen. The MPEG add-on is needed in order to use the MPEG video CDs and Philips CDi. At the current rate of compression one movie can fit on two CDs.

CDi:

Developed by Philips, CDi is an interactive CD format that can be used in a variety of educational and entertainment purposes. Using video footage and CD quality sound CDi has become an industry leader in the field of interactive fun. The MPEG add-on is required to access the full range of CDi software

Kodak Photo CD:

Photos stored on CD have theoretically infinite life, are always picture perfect and will never fade or be otherwise damaged. The Saturn can access Kodak Photo CDs with the use of another Saturn CD which allows the user to see display the photos in various ways. There are many Kodak Photo CD stores open in the major cities.

- Frame Buffering: A technique to maximise graphic display performance by letting the graphics processor chip "set aside" images it has already calculated, allowing it to work on enerating the next fraction of a seconds visual images, all while the screen is still busy painting the last fraction of a second's display.
- Playfields: The background(s), anything that is on screen that it not a sprite. When two playfields (layers of bacground) are contolled properly, parrallax scrolling can result. The Sega Saturn has a whole chip dedicated to controllingbackgrounds (the VDP2 or Video Display Processor 2") that can generate 5 distict layers of background at the same time.
- Polygons/Second: (1000's of) The number of polygons of a given size that can be drawn on the screen in one second. This figure does not include the size of the polygons, nor their texturing, shading, or lighting.
- Realtime: An important adjective that usually indicates the game display is being re-calculated every second, taking into account the full effects of the player's actions. When reffering to a game's response or speed, it means the game responds instantly to the player's commands.
- Render: Drawing 3D graphical objects on a computer or game machine.
 "BUG" and "Clockwork Knight" are filled with beautifully rendered characters.
- Texture Mapping: Copying a bit-map onto the faces of selected polygons to give the illusion of surface texture. "Daytona USA" is a great example of a texture mapped game.
- Wireframe: A connect the dots approach to showing graphical objects by drawing lines between sets of points that make up a geometric outline.
- Dynamic Perspective: Constantly changing the point of view ("camera angle") so that the players feel that they are weaving in and around the on-screen action. Typically requires strong scaling and rotational capabilities. This can be seen on Sega Sports games on Saturn.

1. SPECIFICATIONS

Ratings

Model	MK - 80200-50		
Power supply	AC220-240 V 50/60 Hz		
Power consumption	Approx. 20 W		
Operating environment	Temperature 5 ℃ to 35 ℃ Humidity10% to 80% RH (no condensation)		
Dimensions	260 mm(W) × 230 mm(L) × 83 mm(H) (10.2 inches) × (9.0 inches) × (3.2 inches)		

Specifications

	Master	32bit RISC SH2 (28.4 MHz, 25MIPS)

		Gouraud shading			
Sound	PCM & FM sound source	32 channels 16 bit sampling Sampling rate 44.1 kHz max. Audio DSP			
CD-ROM	Intelligent double-speed CD	drive			

[Note] Characteristics and specifications may be changed without notice.

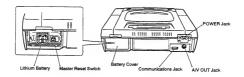

2. IDENTIFYING PARTS

2-1. Front View of Console

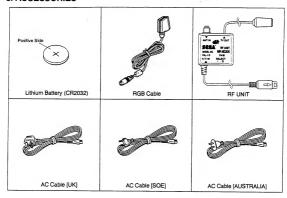

2-3. Control pad

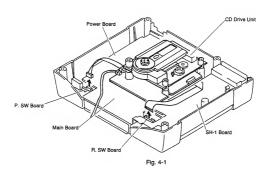

2-2. Back View of Console

3. ACCESSORIES

4. IDENTIFICATIONS AND LOCATIONS OF CIRCUIT BOARDS

5. DISASSEMBLY PROCEDURE

5-1. Top Case Removal

 Remove six screws (a) and then the top case in the direction of the arrow.

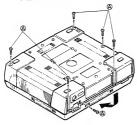

Fig. 5-1

- 5-2. CD Compartment Lid Removal

 1) Remove two screws (B) and then the bracket lid CD
 - 2) Remove spring (C).
 - 3) Remove two screws (D) and then the oil dumper.
 - 4) Push the lever in the direction of arrow
 (E) to release the boss and then push the lever in the direction of arrow
 (F) to remove the CD compartment lid

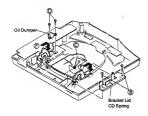

Fig. 5-2

5-3. CD Drive Unit Removal

Disconnect two connectors and one flat cable.
 Remove the CD drive unit in the direction of arrow

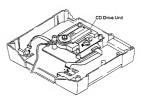

Fig. 5-3

5-4. SH-1 Board Removal

- Remove four screws

 and then the top shield nlate

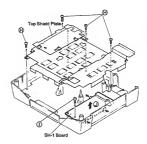

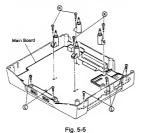

Fig. 5-4

5-5. Main Board Removal

- 1) Remove four screws (holding the CD drive unit supports.
- 2) Remove five screws (L) and then the main board.

5-6. Power, Power Indicator and R. SW Boards Removal

- 1) Remove three screws @ and then the power
- 2) Remove screw (N) and then the power indicator
- 3) Remove two screws \bigcirc and then the R. SW board.

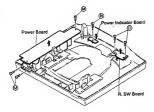

Fig. 5-6

6. CD DRIVE MAINTENANCE AND ADJUSTMENT

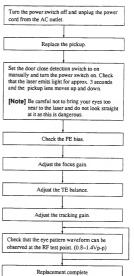

6-1. Maintenance of Pickup

- 1) Checking the laser diode
- As the laser diode wears out, the RF level (amplitude of eye pattern) becomes lower.
- Check that the RF level is 0.8V-1.4Vp-p during maintenance. If the RF level is less that 0.8Vp-p then the pickup should be replaced.

2) Variable resistor on the APC board

The variable resistor attached to the pickup on the APC board is used to adjust the output power of the laser. This adjustment is done at the factory and can not be performed in the field. If the laser's output power is low, the laser diode has worm out and should be replaced. Adjusting this variable resistor may cause damage to the laser diode.

6-2. Laser Pickup Replacement Procedure

[Note] Since the adjutments influence each other, it may be necessary to repeat them 2 to 3 times, times.

Adjustment Preparation

Apply markings to the positions of the variable resistors before adjustment. If the adjustment are out of the specifications, the following symptoms may occur.

[Focus gain]

If the focus adjustment is too low the pickup lens will not be able to focus properly and the disk will not rotate. If the adjustment is too high portions of a track may be skipped and noise will increase.

[Tracking gain]

If the tracking adjustment is too low the drive is more susceptable to shocks or bumps, portions of a track may be skipped or the disk time counter may stop.

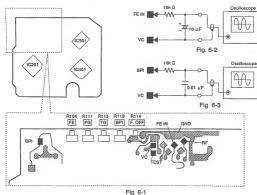

If the adjustment is too high the pickup lens may oscillate leading to unstable or distorted sound.

The focus and tracking adjustments are done so as to mutually satisfy conflicting characteristics.

6-3. Test equipment and tools necessary for adjustment

- I. Oscilloscope
- 2. DC voltmeter
- 3. Non-metallic adjustment screwdriver
- 4. Test CD (A-BEC TCD-792A)

6-4. CD Drive Unit Adjustment Procedure

6-4-1. FE (Focus Error) bias adjustment and focus gain adjustment

- Connect the oscilloscope to test point FE IN as shown in Fig. 6-2.
- Turn the power switch on and set the CD drive to the stop mode.
- Adjust R114 (FE bios) so the DC voltage at the test point (FE IN) is 0V.
- Play the first track of the test CD and adjust R111 (Focus gain) so the DC voltage is ~ 7mV.

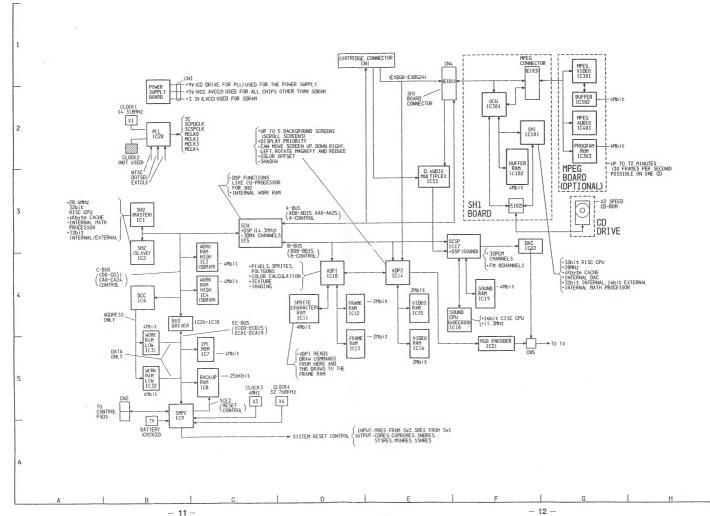

6-4-2. FE balance and tracking gain adjustments

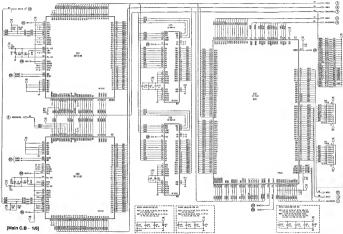

- Connect the oscilloscope to test point BP IN as shown in Fig. 6-3.
- Turn the power switch on and play the first track of the test CD.
- After play has begun, connect the TEST pin to GND.
- Adjust R104 (FE balance) so the center voltage of the waveform is 0V.
- Adjust R113 (tracking gain) so the amplitude of the waveform is 0.4V as in Fig. 6-4.

Pin Name

Pin Name	Function
A0~A9	Address inputs Row addresses A0-A8 Column addresses A0-A7 Bank select address A9
1/00-1/015	Data inputs/outputs
হ্র	Chip select
RAS	Row address strobe command
CAS	Column address strobe command
WE	Write enable
DQMU	High-order byte input/output mask
DQML	Low-order byte input/output mask
CLK	Clock input
CKE	Clock enable
Vcc	Power supply
V _{ss}	Ground
V _{cc} Q	Power supply of I/O pins
V _{ss} Q	Ground of I/O pins
NC	Not connected

<u>CS</u>	Chip select
RAS	Row address strobe command
CAS	Col / address strobe command
WE	Writre enable
DQML, DQMU	DQ mask enable
V _{cc}	Supply voltage
V _{SS} , GND	Ground
NC	No connection

No.	1/0	Pin Name	Function
1, 7, 13, 25, 38, 44, 50	-	vcc	Power supply of internal circuits.
4, 10, 26, 41, 47, 50	-	VSS	Ground pins-
2, 3, 5, 6, 8, 9, 11, 12, 39, 40, 42, 43, 45, 46, 48, 49	1/0	DQ1-DQ16	I/O pins are the same as conventional DRAM.
14, 36	1	DQML, DQMU	DQMU controls upper byte and DQML controls lower byte input/output beffers. In read mode, DQMU, DQML control output beffer impedance, IED onder, DQMU DQML control output beffer impedance is fixed byte of the control output beffer become high impedance. IFD DQMU, DQML is low, output beffer become low imredance. IFD DQMU, DQML control is write mode, DQMU, DQML control word mask. If DQMU, DQML control word mask if DQMU, DQML is low impedance is not written to memory cell. If DQMU, DQML is low impedance is not written to memory cell.
15, 16, 17	1	WE CAS RAS	WE CAS RAS have the same names with conventional DRAM. But these pins have different definitions with conventional ones. All of these pins only define command cycle definition. For detail information see command table.
18	1	ত্ত	S low start the command input cycle. When S is high, all input are not referenced. But even if S is high, internal operations i.e. bank active or burst are not changed.
19	1	A9	A9 is bank select signal (BS). In command cycle, A9=low select bank A and A9=high select bank B.

No.	1/0	Pin Name	Function ,
20, 21-24, 27-30	I	A0-A8	Row address (AVO-AXG, AXS) is determined by AO-AS level at the bank active command cycle CLK rising edge. (AXT is don't care.) Column address (AYO-AYT) is determined by AO-AT evel at read or write command cycle CLK rising edge. And this column address become burst a caccess start address. AS define proctage mode command cycle, both banks at precharged. But AS-love in when AS-high in precharge command cycle, only one bank that is selected AS (ES) is percharged. And when AS-high in read or write command cycle, the precharge Color and AS-love in the order and the active and the color write command cycle, the precharge Color and the active and the order and the active active and the color and the
31, 32	-	GND	Ground
33, 37	-	NC	Not connected.
34	1	CKE	CKE determine next CLK is valid or not. If CKE is high next CLK rising edge is valid, but if CKE is low, next CLK is inwalled. If CLK rising edge is realled internal clock is not asserted and μ PD459416 becomes hall operation. And when μ PD459216 id each on in burst mode and CKE is negated, μ PD459216 enter power down mode. During power down mode CKE must keep low level.
35	1	CLK	CLK is the master clock input pin. The other inputs signals are referenced at CLK rising edge.

Description

No.	1/0	Name	Function	
1	-	NPSEL	NTSC (5V)/PAL (0V) mode switching control	
2		DOTSEL	320PIX (0V)/352PIX (5V) mode switching control	
3		SYSRES	Reset (0V reset)	
4	1 1	TEST	Test pin	
- 5	0	SCPCLK	Clock signal output	
6	-	EXTCLK	External clock input / CMOS with pull-down resistor incorporated	
7	1	oscsw	Crystal oscillation/external clock signal input switching control (5V: Crystal oscillation, 0V: External clock signal) / CMOS I with pull-up resistor incorporated	
8	-	DGND	Ground of digital circuits	
9	0	OSOUT2	Crystal oscillator output (OSC2) / Oscillation output O	
10	1	OSIN2	Crystal oscillator input (OSC2) / Oscillation input 1	
11	-	OSVDD2	VDD of crystal oscillator (OSC2)	
12	0	PDOUT2	Phase detector (PD2) output	
13	1	VCOIN2	VCO2 input / Analog l	
14	14-5	AC2	Phase compensator pin / Analog	
15	0	APO2	VCO2 amp output / Analog O	
16	-	AVDD2	Analog VDD of VCO2	
17		SNDCLK	Clock signal output	
18	1/0	DOTCLK	Clock signal output	
19	-	AVDDI	Analog VDD of VCOI	
20	0	APO1	VCO1 amp output / Analog O	
21	_	ACI	Phase compensator pin / Analog	
22	1	VCOIN1	VCO1 input / Analog	
23	0	PDOUT1	Phase detector (PD1) output	
24		OSVDD1	VDD of crystal oscillator (OSC1)	
25		OSIN1	Crystal oscillator input (OSC1) / Oscillation input	
26	0	OSOUT1	Crystal oscillator output (OSC1) / Oscillation output O	
27	+ -	DVDD	VDD of digital circuits	
28	0	FSC	Clock output signal	

IC21

IC CXA1645M SOP SONY Parts No.: 315-5314

Block Diagram

Description

No.	1/0	Pin Name	Function	
1	-	GND1	Ground of circuits other than RGB, composite video and Y/C output circuits.	
2		RIN		
3	1 [GIN	Analog RGB signal inputs. The signals should be input with 100%=1Vp-p (max.).	
4		BIN	(max.).	
5	-	NC	Not connected.	
6	1	SCIN	Subcarrier input	
7	1	NPIN	NTSC/PAL mode switching pin	
8	0	BFOUT	BF pulse monitoring output	
9	-	YCLPC	Time constant which determines the Y signal clamp is connected.	
10	1	SYNC IN	Composite sync signal input. Receives it at the TTL level.	
11		NC	Not connected.	
12	- "	VCC1	Power supply of circuit other than RGB, composite video and Y/C output	
13	-	IREF	Pin to determine the internal reference current level.	
14	- 1	VREF	Internal reference voltage pin.	
15	0	COUT	Chroma signal output. Can drive a 75 Ω load.	
16	0	YOUT	Y (luma) signal output. Can drive a 75 Ω load.	
17	-	YTRAP	Reduces cross-color caused by subcarrier frequency components contained in the Y signal.	
18	-	FO	Adjusts fo of the internal filter. Connect the following resistor between the pin and ground depending on the NTSC or PAL mode.	
19		VCC2	Power supply of RGB, composite video and Y/C output circuits.	
20	0	CVOUT	Composite video signal output. This can drive a 75 Ω load.	
21		BOUT		
22	O GOUT		Analog RGB signal outputs. These can drive a 75 Ω load.	
23		ROUT		
24		GND2	Ground of RGB, composite video and Y/C output circuits
